Summary

Full Stack Software Engineer with 2 years of experience modernizing legacy systems and sustaining mission-critical enterprise applications at 99% uptime. Skilled in forensic debugging — tracing complex data flows and delivering long-term architectural solutions over quick patches. Works across the stack: Angular, React, and Next.js frontends; .NET 10/C#, Spring Boot, and Express.js services in TypeScript and Java; deployed on Azure (App Services, Service Bus, Blob Storage) and AWS (Docker, Kubernetes). Applies Hexagonal and Clean Architecture principles, with a strong interest in web privacy and data governance.

Experience

Software Developer, ME-ICT – Hybrid June 2026 – present

- Re-architecting a legacy .NET stored-procedure monolith into cloud-native microservices on Azure, applying Hexagonal Architecture and EF Core to establish clean domain boundaries and testability.
- Building enterprise backend services in .NET 10 and C#, deploying to Azure App Services with Service Bus for asynchronous messaging and Blob Storage for object storage.

Associate Application Support Engineer & Software Engineer, Amihan Global Oct 2024 – May 2026
Strategies – Remote

- Led the full-lifecycle migration of BDO Internal System from Angular 7 to Angular 18, modernizing the legacy codebase to use the Ivy Engine and reducing estimated page load times by ~30%.
- Performed forensic debugging on legacy codebases — tracing data flow through complex systems, investigating code history, and recommending long-term architectural fixes over quick patches for enterprise clients (BDO, SMDC).
- Operated cloud-native infrastructure on AWS using Docker and Kubernetes for containerized enterprise workloads; enforced Clean Architecture through code reviews across the team.
- Built and shipped responsive frontend components and robust backend services for internal ventures (Bahai Deals, Chemlink) using Next.js, Express.js, and TypeScript, contributing to platforms generating over \$12M in gross revenue.
- Took full ownership of L3 support tickets and QA tasks, maintaining 99% system uptime while independently researching unknowns and proposing solutions before escalating.
- Used Spring Boot, Express.js, React, React Native, Angular, Docker, Kubernetes, GitHub, Go, Java, TypeScript, and HTML.

Education

National University, Information Technology – Manila, Philippines Aug 2020 – June 2024

- Capstone: Ecotopia — A Parallax-Enabled Website for Climate Change Awareness with Interactive Mini Arcade Game
- GWA 3.49, Cum Laude

Skills

Frontend: Angular, React, React Native, Expo, Next.js, HTML, CSS

Backend: Spring Boot, .NET 10, Express.js, TypeScript, Java, Go

Tools & Platforms: Docker, Kubernetes, Azure, AWS, Git, Postman, Linux, Figma

AI: Prompt Engineering, RAG, LLMs, GenAI

Databases: SQL Server Management Studio, Redis, SQL, NoSQL, Neo4j

Projects

PostWall

A minimal, native sticky-notes app for Mac, Windows and Linux. Paper-warm colors that are easy on the eyes, a quiet WYSIWYG editor, and a wall that finally feels like yours.

RainyDays

Jan 2025

A family emergency fund system for countries where hospital bills arrive before help does.

- Enforces transparency, contribution limits, and abuse prevention
- Works without holding or pooling money

Personal Website

A digital portfolio and knowledge base to showcase technical projects, technical writing, and professional services.

Publications

Ecotopia: A Parallax Enabled Website for Climate Change Awareness with Interactive Mini Arcade Game

This study presents a website focused on raising awareness about climate change
